Better for you. Better for your family. Better for our planet.

PurBrite H2O

Cleaner Water. Fewer Chemicals. Better Pool.

CleanWaterCleanAir.com **Swim Cleaner. Feel Good. Live Better.** CleanWaterCleanAir.com

PurBrite H2O uses the power of Oxygen to naturally destroy contaminants and keep your water crystal clear and balanced.

Chlorine	PurBrite H2O	Winner
	No Harsh Chemicals	
Daily Testing	One Step Every 2 Weeks	PurBrite H2O
Harsh Chemicals	No Harsh Chemicals	PurBrite H2O
Burning Eyes	Soft Comfortable Water	PurBrite H2O
Dry Skin & Hair	No Chlorine Smell	PurBrite H2O
Chlorine Smell	More Time to Enjoy Your Pool	PurBrite H2O

Instructions For Use

- For Small and Medium size pools (Up to 18,000 gallons) use 1 packet
- For Large Pools (Over 18,000 gallons) use 2 packets
- Before initial dose, do not use chlorine or salt in the pool for three days. This is to minimize the amount of chlorine or salt in the pool prior to using PurBrite.
- Drop ENTIRE packet(s) in pool skimmer. Turn on pool pump. The Packet will completely dissolve in water. Place packet in an area of the pool that has flowing water to aid in the packet dissolving.
- Packet will dissolve after about a minute
- Wait 5 minutes
- Enjoy your pool!

Frequently Asked Questions

How often will I need to add an additional dose?

The frequency of dosing involves many factors. You should expect to have to dose once every two weeks during the summer months and once every three weeks during the winter months. This is due to the difference in sunlight between summer and winter. Also, if your pool is used actively with multiple swimmers, expect that you may have to dose more often. This is also true after high rain events.

I dosed my pool/hot tub and the water looks greenish.

Often peroxide will react with chlorine or chloramine creating a yellow/greenish color. This color will disappear in several hours. You can also re-dose as that reaction reduces both the chlorine and peroxides.

Goodbye Harsh chemicals. Hello Clean Pool.

How do I know when I should dose?

The use of this product gives exceptional water clarity. If you notice a change in clarity, add an additional dose. You may also test the water periodically with a hydrogen peroxide test strip. You will want to see a 50 ppm level. If below, dose.

What is the difference using hydrogen peroxide and chlorine?

Hydrogen peroxide, reacts to form H2O2 as well as other oxygen molecules that are healthy for the skin. Your skin, being the largest organ in the body, will transfer the oxygen molecules into your red blood cells.

If we used too much PurBrite, what should I do?

It would be very hard to overdose a pool or hot tub to a dangerous level. Test using a hydrogen peroxide test strip. So long as the concentration is below 100 ppm, you can still use the pool or hot tub without any issue.

Do I still have to use stabilizers for alkalinity or pH.

The use of PurBrite will mitigate the need to use additional stabilizing chemicals. The PurBrite product provides a known concentration of O2, O1 and OH which, in turn, keeps the pH and alkalinity controlled. This makes treating pools and hot tubs much easier.

Item	Quantity/Pack	Pricing
Pool Pak	**6**	**$254.**
Hot Tub Pak	**10**	**$138.**

Using oxygen for a true clean, with no harsh chemicals.

PoolPak: Freshen your pool every 2 weeks with one packet of PurBrite H2O per 10,000 Gallons. First batch will interact and discolor with chlorine. Add a second package to clear the water. 6-per box.

HotTubPak: Freshen your Hot Tub every 2 weeks with one packet of PurBrite H2O Spa. First batch will interact and discolor with chlorine. Add a second package to clear the water. One packet every 2 weeks. 10-per box.
